Magnum® Fiber Reinforced MgO Lap Siding

Beauty, Strength, and Protection That Lasts a Lifetime

When it comes to protecting your home, family, and investment, ordinary siding simply isn't enough. Magnum® Fiber Reinforced MgO Lap Siding delivers unmatched performance, combining timeless curb appeal with industry-leading durability, safety, and sustainability.
Built to withstand the harshest environments, Magnum Lap Siding offers peace of mind that traditional wood, fiber cement, vinyl, and engineered wood products simply cannot match.

Superior Protection from the Elements

Fire Resistant

Magnum® Lap Siding is naturally non-combustible and highly fire resistant. Unlike wood and vinyl siding, Magnum® Lap Siding will not ignite, melt, or contribute fuel to a fire, providing an extra layer of protection for your home and loved ones.

Water Resistant

Rain, humidity, and moisture are no match for Magnum Lap Siding. It will not swell, rot, delaminate, or deteriorate when exposed to water, making it ideal for all climates, including coastal and high-humidity regions.

Insect Proof

Termites, carpenter ants, and other wood-destroying insects cannot consume or damage Magnum® Lap Siding. Your home's exterior remains protected without the vulnerabilities of traditional wood-based materials

Mold and Mildew Resistant

Because Magnum® Lap Siding contains no organic food source, it will not support the growth of mold, mildew, or fungus. This helps maintain a healthier living environment while preserving the beauty of your exterior.
