Magnum® Mag-111 MgO Siding

Beauty, Strength, and Protection That Lasts a Lifetime

When it comes to protecting your home, family, and investment, ordinary siding simply isn't enough. Magnum® Fiber Reinforced MgO Mag-111 Siding delivers unmatched performance, combining timeless curb appeal with industry-leading durability, safety, and sustainability.

Built to withstand the harshest environments, Magnum Mag-111 siding offers peace of mind that traditional wood, fiber cement, vinyl, and engineered wood products simply cannot match.

Superior Protection from the Elements

Fire Resistant

Magnum® Mag-111 Siding is naturally non-combustible and highly fire resistant. Unlike wood and vinyl siding, Magnum® Mag-111 will not ignite, melt, or contribute fuel to a fire, providing an extra layer of protection for your home and loved ones.

Water Resistant

Rain, humidity, and moisture are no match for Magnum Mag-111. It will not swell, rot, delaminate, or deteriorate when exposed to water, making it ideal for all climates, including coastal and high-humidity regions.

Insect Proof

Termites, carpenter ants, and other wood-destroying insects cannot consume or damage Magnum® Mag-111 Siding. Your home's exterior remains protected without the vulnerabilities of traditional wood-based materials

Mold and Mildew Resistant

P.O. Box 90
Seffner, FL 33583
